

Twenty Independent Cold-Review Packets

Terminal Exact Objects - Dylan M. Roy Mathematical Research Program

Collection date: 27 July 2026

Collection purpose

Each packet is standalone and contains the exact statement, complete controlling source text, status and dependency firewalls, hostile checks, reproduction instructions, manifest, and a fail-closed verdict form. Assign one packet to one researcher. Reviewers should not coordinate before issuing provisional verdicts.

Verdict vocabulary

- APPROVE - exact statement and proof are correct within scope.
- APPROVE WITH CLARIFICATIONS - correct, but nonmaterial clarifications are required.
- AMEND REQUIRED - statement may survive, but a material proof, binding, or reproducibility repair is required.
- REJECT - exact statement is false or unsupported.
- CANNOT VERIFY - decisive information or execution capability is unavailable.

Packet index

No.	ID	Title	Object class	Recommended expertise
1	EC-005	Canonical A2 Fold-Gap Identity	Exact algebraic identity	Singularity theory / calculus / asymptotic normal forms
2	EC-006	Planar Truncated-Normal Second-Moment Identity	Exact Gaussian moment identity	Probability / Gaussian integrals / numerical analysis
3	EC-007	Planar Coalesced Six-Pin Conditional Jet Law	Exact Gaussian conditional law	Gaussian random fields / covariance calculus / linear algebra
4	EC-008	Planar Collision-Gram Covariance Determinant	Exact determinant identity	Symbolic algebra / covariance matrices / Gaussian geometry
5	EC-010	Declared Convex-Combination Polynomial Identities	Exact polynomial identities	Algebra / polynomial identities / real analysis
6	EC-011	Adjoint-Orbit Conservation and Section Normalization	Exact differential identity	Dynamical systems / differential geometry / variational equations
7	EC-012	Closed Strip-Threshold Majorant	Exact scalar inequality	Inequalities / optimization / dynamical-systems estimates
8	EC-013	Conditional Elder-Rule Defect Dichotomy	Deterministic topology / Morse theory lemma	Morse theory / persistent homology / merge trees
9	EC-014	Corrected Six-Pin Pair-Frame Jacobian and Contact Power	Exact change-of-variables identity	Change of variables / Gaussian density transformations / symbolic algebra
10	EC-015	Repaired Witness-Parameterized Degree-Four	Deterministic existence and openness	Dynamical systems / interval verification / topology of

		PRCP Event		inequalities
11	EC-016	Retirement of Imported a _r and Continuum Jet-Box Certification Claims	Terminal negative result / claim retirement	Statistical inference / numerical validation / scientific methodology
12	EC-017	Positive Fixed-r Typed Finite-Q4 Palm Mass	Finite-dimensional Gaussian/Palm positivity	Gaussian measures / Palm reweighting / interval analysis
13	EC-018	Full-Dimensional Interval-Certified Degree-Four Route-B Box	Executable interval certificate	Validated numerics / interval arithmetic / dynamical systems
14	EC-020	Uniform-r Fixed-q Full-Dimensional Degree-Four Corridor	Uniform deterministic interval theorem	Validated numerics / monotonicity / gradient dynamics
15	EC-021	Uniform Positive Typed Finite-Q4 Palm Mass of the Fixed-q Corridor	Uniform finite-dimensional probability lemma	Gaussian probability / Palm laws / asymptotic uniformity
16	P02-LM-001	Conditional Degree-Four Deterministic Capture Majorant	Dynamical-systems lemma	Planar dynamical systems / invariant regions / hyperbolic equilibria
17	P02-LM-002	Exact Determinant-Weight r ⁴ Second-Moment Interface	Algebraic/probabilistic interface	Matrix algebra / probability inequalities / Kac-Rice weights
18	P02-LM-005	Uniform Exact Nine-Jet Gaussian Density and Moment Interface	Gaussian conditional regularity lemma	Gaussian random fields / Fourier analysis / conditional covariance
19	P02-LM-007	Uniform Conditioned Fifth-Derivative Supremum Tail	Gaussian-process concentration lemma	Gaussian processes / concentration inequalities / random fields
20	P02-LM-008	Exact Determinant-Weighted Palm-Tail Transfer	Abstract probability interface	Probability / change of measure / rare-event bounds

Assignment control

Recommended practice: send only the assigned packet; request a signed verdict and independent derivation; do not disclose other reviewers or preliminary outcomes; preserve all returned files unchanged; and compare findings only after every provisional review is frozen.
